

WHY THE BIRMINGHAM GROUP WAS SET UP

As yet there is no medical cure for tinnitus, and for this reason it needs to be managed from a therapeutic angle. Information, advice and support are the best medicines for tinnitus, and belonging to a group is one way of receiving a regular dose !

AIMS OF OUR GROUP

- ◆ To give all tinnitus sufferers in Birmingham and the surrounding areas access to up-to-date information through :-
Meetings : Newsletters : Support literature:
- ◆ To offer anyone troubled by tinnitus the chance to meet other sufferers in a supportive environment.
- ◆ To provide opportunities for members to share ideas about coping with tinnitus.
- ◆ To support tinnitus research and work towards improvement of services available to tinnitus sufferers.

INFORMAL SUPPORT MEETINGS

These are held on the second Tuesday of each month in the centre of Birmingham at Carrs Lane Church Centre (opposite back entrance of Marks & Spencers). They provide an opportunity for people to share experiences and ways of coping with tinnitus. These meetings start at 10.30 a.m. and finish at 12.00 midday. They are ideal for the new sufferer and everyone, including family and friends, is welcome to drop in.

SUBSCRIPTIONS

We have two levels of subscription fees.
(1) For £7 pa you can join our Group and receive six copies of our newsletter EARS NEWS and access our support services.
(2) For £17 pa (an extra £10) as well as being a member of our group, you can become an affiliated member of the British Tinnitus Association (BTA). You will then also receive their quarterly journal QUIET.

MEMBERSHIP

When you become a member of our group you are supplied with a **free booklet** which provides immediate advice and information. Committee members are available to offer support and guidance whenever it is needed. Very often, relatives and friends of those who have tinnitus find that they themselves need help. We are here to support those people too.

Birmingham & District Tinnitus Group Membership Application Form

WHAT TINNITUS IS

Tinnitus is the name given to any kind of noise heard in the ears or head. Different people hear different noises: banging, whistling, humming, buzzing, cracking and ringing – to name but a few. It may seem to come from one ear, both ears or from inside the head; and can vary greatly in volume.

The precise mechanism of tinnitus is not known. However, it is nearly always associated with some kind of damage to the hearing system which can be put down to a number of reasons such as noise exposure, infections, genetic disorders, and general wear and tear. Tinnitus can affect anyone whose hearing system has been damaged to any degree, from those with little or no hearing loss to those who cannot hear at all.

WHAT TINNITUS IS NOT

Tinnitus is not a disease in itself but a symptom or side effect, usually of damage to the hearing system. Very, very rarely does it have a sinister cause, and it is certainly not a sign of insanity!
